## THE HOT SEAT

## **Accelerated Orthodontics**

| Contributor |  | What is the primary modal-<br>ity for delivering accelerat-<br>ed orthodontics (AO) in<br>your practice?   | Do you offer AO as an<br>option, or is it simply built<br>into your treatment plans?                        | Are the patients who take<br>advantage of A0 in your<br>practice primarily fixed-<br>appliance patients, clear-<br>aligner patients, or both? | Do you charge a premium<br>for AO, or is the cost built<br>into the overall treatment<br>price? |
|-------------|--|--|---|---|---|
| DI          | <b>odd Dickerson,</b><br>DS, MS<br>hoenix, AZ          | OrthoPulse and AcceleDent.   | It's offered to everyone, but<br>mandatory for difficult cases<br>and patients with high-strung<br>parents. | Both.   | Patients do not value it unless<br>there is an associated fee.                                  |
| DI          | <b>asmine Gorton,</b><br>MD, MS<br>arkspur, CA         | AcceleDent is our "go to" for<br>AO. We also use OrthoPulse<br>when AO is restricted to one<br>arch and microperforation with<br>an electric driver for space clo-<br>sure when the extraction site is<br>not fresh.                     | For adults and longer cases, it<br>is only "technically optional"—<br>like brushing your teeth!             | Almost 100% of our clear-align-<br>er patients and 15% of our<br>fixed-appliance patients (cases<br>requiring more than 18<br>months).        | We charge a premium based on<br>a "pass-through" model.   |
|             | larc S.<br>emchen,<br>MD<br>ew York, NY<br>x Research. | We have been beta testing<br>OrthoPulse for more than two<br>years with very promising<br>results. We also use AcceleDent,<br>Propel, and accelerated osteo-<br>genic orthodontics in selected<br>cases. Each modality has its<br>place. | We offer AO as an option for<br>patients who we think might<br>see the value.                               | AO is used by about an equal<br>number of fixed and aligner<br>patients.  | We have an extra charge for<br>AO.  |
| DI          | <b>lazyar Moshiri,</b><br>MD, MS<br>t. Louis, MO       | Our primary modality is<br>AcceleDent, but we use Propel<br>treatments as well for our<br>patients.  | Currently, the modality is<br>optional for my patients and<br>offered as a premium service.                 | Clear-aligner patients make up<br>about 80% of our patients<br>using AO.  | We charge \$700 for AcceleDent<br>and \$400 per Propel treat-<br>ment.                          |

This regular column is compiled by JCO Contributing Editor John W. Graham, DDS, MD. Selected participants are asked for brief replies to a series of questions on a single topic. Your suggestions for future Hot Seat topics or participants are welcome.

| Do you feel that the cost of<br>AO is justifiable?  | What do you see as the primary benefit of AO?   | What has been your overall patient response to AO?   | How much, in percentage<br>terms, do you feel AO<br>reduces your treatment<br>times?   | Why do you think AO still isn't<br>utilized in most U.S. ortho-<br>dontic practices?   |
|---|---|--|--|--|
| Yes, especially for patients who<br>ask, "How much longer?"   | Invisalign cases finish better<br>and faster, with fewer refine-<br>ments and fewer appointments.   | Excellent.   | 35-60% at the moment.  | Fear of higher fees and lack of<br>experience.   |
| Yes, but I would like to see it be<br>less so and for it to become a<br>"why not?" response from the<br>patient instead of a "what?!?!"<br>response.      | Adults: (1) acceleration and (2)<br>improved comfort. Teens: (1)<br>improved comfort and (2)<br>acceleration.   | AcceleDent: mostly great, some<br>neutral. Microperforation: little<br>to no enthusiasm, but most will<br>tolerate it.   | 30-50%, depending on the technique and the patient.  | Good question!   |
| It depends on the patient's pri-<br>orities. If the quickest possible<br>treatment is the goal, then AO<br>should be included in the treat-<br>ment plan. | The primary benefits include<br>accelerated treatment and, in<br>the case of OrthoPulse and<br>AcceleDent, increased patient<br>comfort. It is likely that it<br>improves aligner compliance,<br>but compliance with the device<br>itself is another story. | They are impressed that we are<br>pushing the technology barriers<br>to meet their desires for speedi-<br>er treatment.  | We would estimate about 30%.<br>A good proportion of the time<br>savings is in the initial align-<br>ment, and I think there is gen-<br>eral agreement on that fact. | AO is a new technology, and there is<br>not yet enough hard positive evi-<br>dence. Cost is a factor as well. I<br>think we will see costs decline as<br>more vendors enter this market,<br>while usage will increase. |
| AO is a premium service that<br>people want—so, yes.<br>Additionally, practices come out<br>ahead on the costs with reduced<br>chairtime.                 | Reduced treatment times mean<br>increased cooperation, fewer<br>hygiene issues, and an overall<br>improved treatment experience<br>for the doctor and patient.  | Patients want more esthetic and<br>faster treatment; thus, many<br>have been intrigued by the<br>offer, and some pursue it<br>aggressively. Others may not<br>wish to have the additional<br>cost, as can be expected. | 30-60%, depending on patient biology and cooperation.  | I believe it may still be too soon for<br>some doctors, pending the availabil-<br>ity of strong studies and data sup-<br>porting AO.   |

| Contributor  | What is the primary modal-<br>ity for delivering accelerat-<br>ed orthodontics (AO) in<br>your practice?   | Do you offer AO as an<br>option, or is it simply built<br>into your treatment plans? | Are the patients who take<br>advantage of AO in your<br>practice primarily fixed-<br>appliance patients, clear-<br>aligner patients, or both?                              | Do you charge a premium<br>for AO, or is the cost built<br>into the overall treatment<br>price?          |
|--|--|--|--|--|
| Tito Norris,<br>DDS<br>San Antonio, TX   | We have been beta testing<br>OrthoPulse a few years and<br>have seen impressive results.<br>We also offer microperfora-<br>tions, AcceleDent, and surgically<br>facilitated orthodontic therapy<br>to our patients. OrthoPulse has<br>been the most widely accepted. | lt's an option.  | Both, although we prefer to<br>pair this technology with clear<br>aligners.  | We charge a premium.   |
| Sharon Orton-<br>Gibbs,<br>BDS, FDS, DOrth<br>MOrth, MSc<br>Thames Ditton,<br>Surrey, U.K.<br>Adviser to and shareholder of<br>AcceleDent. | AcceleDent—it's easy for<br>patients and can save clinic<br>, time.  | An option. What's paid for is<br>valued and more likely used.                        | In my published sample of 117:<br>45% ceramic fixed, 16% lin-<br>gual, 16% classic fixed, 14%<br>Invisalign, and 9% first phase.<br>Of these patients, 76% were<br>adults. | AO costs are additional.<br>Patients decide if the cost and<br>commitment are worth faster<br>treatment. |
| Sonia Palleck,<br>DDS, MCID<br>Woodstock,<br>Ontario   | Insignia custom appliances with<br>AcceleDent.   | It's the standard of care.   | Both, but I treat more fixed<br>than aligner cases (about 4:1).  | It's built in.   |
| Timothy G.<br>Shaughnessy,<br>DDS, MS<br>Suwanee, GA   | <ol> <li>Well-positioned brackets at<br/>the initial bonding!</li> <li>Appropriate diagnosis and<br/>treatment planning!</li> <li>AO device used: OrthoPulse.</li> </ol>   | Photobiomodulation with<br>OrthoPulse is a must with<br>aligner treatment.           | Both, but my experience with<br>fixed appliances is limited to<br>clinical-trial testing of<br>OrthoPulse.   | OrthoPulse is provided and<br>built into my aligner treatment<br>fee.                                    |
| Commentary by Dr. Graham   | l'm pickin' up good vibrations.  | Jasmine and Sonia for the win.   | Both. Nearly all of my adults<br>use AO, and the majority of<br>my patients are adults.  | It depends on the patients and<br>how my treatment coordinator<br>reads their financial situation.       |

| Do you feel that the cost of<br>AO is justifiable?   | What do you see as the primary benefit of AO?  | What has been your overall patient response to AO?   | How much, in percentage<br>terms, do you feel AO<br>reduces your treatment<br>times?   | Why do you think AO still isn't<br>utilized in most U.S. ortho-<br>dontic practices?   |
|--|--|--|--|--|
| Absolutely. I'd do it if I were<br>treating myself or my children.   | We can treat patients in fewer<br>visits.  | They're thrilled.  | 50%.   | Most doctors don't realize that by<br>utilizing accelerated treatment (and<br>passing associated fees along to the<br>patients), they can significantly<br>increase profitability per visit. |
| It depends. It is offered to all patients with any of the following: a deadline, $\geq 18$ months of projected treatment, concerns about treatment duration or cosmetics, medical/dental reasons for AO, or a long distance from the office. | Faster treatment for all modali-<br>ties, great tracking with<br>Invisalign, and seven- to<br>10-day changes of aligners. For<br>fixed-appliance patients, pain is<br>reduced. | Very positive. Saving treatment<br>time is obvious with Invisalign;<br>fixed-appliance patients need<br>positive feedback during treat-<br>ment. | My research shows 33.5% fast-<br>er for fixed appliances and<br>37% faster for Invisalign.<br>Invisalign is now even quicker,<br>as most patients change align-<br>ers weekly. | Perhaps they don't see the win-win<br>situation. It is speedier for the<br>patient, and chairtime is freed up<br>for the clinician.  |
| Every cost in orthodontic treat-<br>ment is justifiable.   | Quicker to the finish line.  | Amazing! Love it!  | 25% as an average of fixed<br>and aligner cases.   | There is more AO treatment than there are accelerated orthodontists.   |
| Yes, because the clear-aligner<br>patients save measurable treat-<br>ment time and the doctor saves<br>chairtime.  | I'm convinced that aligners can<br>be changed more frequently<br>and with less discomfort if<br>OrthoPulse is faithfully worn<br>for five minutes per arch per<br>day.         | Generally positive, but my<br>experience with A0 is entirely<br>limited to OrthoPulse.   | Aligner treatment time is often<br>reduced by 50% vs. manufac-<br>turer recommendations. Fixed-<br>appliance treatment time<br>reduction is much more difficult<br>to measure. | Randomized clinical trials are need-<br>ed for evidence of treatment time<br>reduction.  |
| Almost everyone agrees with a<br>resounding "yes"! Orthodontists<br>need to stop stepping over dol-<br>lars to pick up pennies.  | Practice differentiation, with reduced treatment times and increased patient comfort.  | Positively positive.   | Tim summed it up well; my<br>fixed-appliance time reduction<br>seems to be around 40%.   | Because they're orthodontists.<br>#sorrynotsorry   |
